

There are 6 data types to choose from (Stock, Stock Index, ETF, Currency, Commodity, Cripto). After selecting one data type e.g., Stock, a menu of 7 choices is presented below the data types menu (Adjusted Close, Close, High, Low, Open, Volume, All).

Choose one or more variables ('All' means all other choices). Then, choose one or more series of the specific data type e.g., Currencies, and First Date and Last Date inputs. Each time you make a selection the selected variables are shown in the upper line under the data types name e.g., 'Close High' under 'StockIndex'.

All data are daily from Yahoo finance site. To reset a selection go back to any data types menu, select a variable e.g., 'High' and deselect it. You will see that your selection is disappeared from the upper line under the data types name.

Once you select all required variables and series, press the green 'Download' button. After a few seconds a basic stats table will show up. Then, you can either download the data as an CSV/Excel/PDF/PRINT, merge it with the current data set, or replace the current data set with the new data using the upper green button. You can change the names of selected series/variables or any cell in the basic stats table so that your new variable names will be more readable. Once you see a success message ('Done'), you will see the new variables at the series picker box (in Control Panel).

Figure 1 presents a typical snapshot of the 'Download Market Data' menu.
