

This option displays in a table with sophisticated search engine all the original variables. By double clicking on a cell, you can edit a particular cell within the table. You can also change variable names by clicking on the name cells (to the right of 'Edit»' cell - the 3rd line from the table top). Deleting entire row or column is done by clearing the row or column numbers (most left column and top row, respectively). finally, by clicking on the right or left wide buttons on the table's top, you may save your changes, or get back to the original data set. Figure 1 below presents a snapshot of 'Edit All Series' option.

Figure 1.
