Here you can download time series or panel data from the internet using API. The URL address should be either XML, or HTML, or JSON, or CSV type and must contain one column of date.

First, copy & paste a URL string from the relevant web site, that refers to data world contents e.g., exchange rates (usually more than one series) and select date ranges. Once you see a table with basic stats of the downloaded, you can edit the series names (most LHS of the table) by double clicking on any cell. Then, add, merge, or replace the current data (AND, OR, or Replace). Finally, by pressing the green button 'Go' you will get a 'Done' message that the merged/replaced data is ready.

To start over, clear the URL string and wait a second. You can also download the table as CSV/EXCEL/PDF for further usage or print them. Notice, however, that sometimes the Web data tables use Java Script codes so, they cannot be downloaded using this menu.
